Connect to Cornet EAP WiFi network under Windows 7

1. Open the ‘Start Menu’ and click on the ‘Contron Panel’.

2. In the Control Panel click on the ‘Network and Internet’ menu item.
3. On the new window click on the ‘Network and Sharing Center’ label.

4. On the screen of the Network and Sharing Center click on the ‘Set up a new connection or network’ label.
5. A new window will pop up. On this you have to choose the ‘Manually connect to a wireless network’ option.

6. On the new ‘Manually connect to a wireless network’ screen do the followings:
   • Type into the ‘Network name’ field the ‘Cornet-EAP’ string. Keep in mind, you have to write exactly the same string.
   • Choose the ‘WPA2-Enterprise’ Security type from the drop-down menu.
   • Choose the ‘AES’ Encryption type from the drop-down menu.
   • Choose Next.

If your computer does not support the WPA2 authentication than you can choose the ‘WPA-Enterprise’ possibility, but in this case you have to choose ‘TKIP’ for encryption type.
7. After adding the Cornet-EAP to the wireless networks, you have to configure its details. On the new window choose the ‘Change connection settings’ options.

8. On the new window choose the ‘Security’ tab and choose the followings:
   - Authentication method: ‘Microsoft: Protected EAP (PEAP)’
   - Click on the ‘Settings’ button.
9. On the next screen the following changes have to be made:
   - The checkbox before ‘Validate server certificate’ have to be unchecked.
   - In Select Authentication Method drop-down menu the ‘Secured password (EAP-MSCHAP v2)’ item have to be selected.
   - Click on the ‘Configure’ button.

10. In the new window there is a single checkbox what have to be unchecked.
11. Click ‘**OK**’ on every opened window.
   - A pop-up window will appear out from Wi-Fi icon. Click on it.
   - Fill the required fields. Use your Cusman username and password.
   - You are now connected, as you can see if you click on the Wi-Fi icon. Among the available Wi-Fi networks, the Cornet-EAP have to be in a connected state.
